## Google play services free for tablet

Google Play Music is Google's music streaming service. It is a competitor to similar services such as Apple Music, Spotify, and Pandora. Each of these services has their own niche, but if you ask us here at Android Authority, Google Play Music is one of the best deals around. Google Play Music offers 35 million songs. It lets you curate playlists and even upload your own music. You can store up to 50,000 of your own songs, and they're always ad-free. You can also use Google Play Music for free, even if it's limited to artist radio, limited jumps, and ads. Let's dive into the nuts and bolts of how to actually use them. Google Play Music app for Android and iPhoneIf you're out and about, and want to listen to some songs, just open the Google Play Music app. If you're reading this, it's already possible on your phone. Otherwise, you can download it here for Android or here for iOS. Once downloaded, turn on the app, and sign in with your Google account. If you don't subscribe to Google Play Music, you'll experience some restrictions. You won't be able to play the specific song you're looking for, just a radio station. They will keep you close to what you want, but not to a particular song. You also have a limited number of jumps — up to six in an hour. Finally, of course, you'll get ads, and occasional requests to subscribe. None of these are absolute deal killers, but they can make your jams on frustrate. Where are you? - Location-based suggestions Your home page contains your recent activity, and recommendations based on your listening history and location. Speaking of locations, Google Play Music has some cool location-based features that you might be interested in. First and foremost, it can customize music suggestions based on your location, such as workout music when you're in the gym. Another neat trick Google Play Music offers is curated suggestions of live performances based on the music you've listened to. If you're a fan of My Life with Thrill Kill Kult — and let's face it, everyone is — this app will let you know that TKK is playing near you in April. Not that superfans like you don't know it yet, but it's useful. Use the Google Play Music app managerIn the app, you can search by song or artist. In search results, you have three options: Tap an artist to open it and see the song. Tap the Play button in the lower-right corner to play the three-dot artist Tap below the play button to start the artist's radio, Share artist, or Shuffle artist songs. After you start playing music, a bar will appear at the bottom of the screen with the name of the artist and song, and one play/pause button. Tap the bar to details, including playback, casting, random, likes or dislikes, and skip or return. This screen also displays album art. In the upper-right corner, tap the music notes icon to see your current playlist. In addition, tapping the three dots next to the icon opens a number of different options such as Start Radio, Radio, and control the library, and of course, the option to buy songs. How to open Google Play Music on your desktopIf you're using a web browser, we strongly recommend that you use Chrome. It has a mini player extension that you can install, which lets you eject the music control box. The app can run in full windows, but if you just want to get out of the way, the mini player is great. This gives you album art, playback controls, and likes and dislike options. If you're still using the full browser, you can start by searching for artists or songs. From there you can click a song or album to play. Google Play Music also lists all your recent history, which can help you take where you left. Once you've selected a song and started playing, you'll see a play bar at the bottom of your browser. First, you have options that include radio controls, library and playlist controls, and share and buy buttons. After that, you have likes and dislike buttons, rotate controls, volumes, track listings, and if you're in Chrome, the option to cast. I'm Feeling LuckyGoogle Play Music also features a prominent Google "I'm Feeling Lucky. These features, such as browser features, generate random results — the radio player here — based on play history, music likes, and more. This can be useful when you're not really sure what you want to listen to. On mobile, you can find it by tapping the menu button, tapping home, and scrolling to the bottom of the page. On the web, the I'm Feeling Lucky button looks like a cube of dice, and is located on the far right side of the homepage in Google Play Music. In Chrome apps, it's easier to find and (also easier to click by accident). It appears as a cube of dice above the playback controls. Upload old songs to Google Play MusicIf you still have old songs purchased from services like iTunes, or if you have songs that have been taken from a CD (legally purchased), you can upload them to Google Play Music and you don't even need to sign up for a premium service to use this feature. Google Play Music lets you upload up to 50,000 songs for free. The bad news is that you can't upload any songs from your Android smartphone or tablet to Google Play Music. You have to use a PC to achieve this. The easiest way is just to use Google's Chrome browser and then download and install the Google Play Store Chrome extension. Then launch the menu, select the Upload Music option and drag any song or folder with the music to add to your cloud song library. You can also search for and select any audio files you've saved on your PC to upload them to Google Play Music. If, for some reason, you don't want to use the Chrome extension, there's also Downloadable Music Manager to PC. Once you've installed it and signed in to your Google account, just follow the instructions to upload your song to Google Play Music. Bonus: PodcastsYou can also use Google Play Music to play your favorite podcasts as well. All Of All it needs to do is search for podcasts, and subscribe. Podcasts are listed in their own section on Google Play Music, and the podcast homepage contains a number of popular podcasts. Beyond that, the podcast interface is exactly like the music interface. One drawback of the podcast interface is that, if you're really left behind in podcasts, it can be difficult to download episodes in bulk, and generally determine where you are in the podcast list. The red dot at the beginning of the podcast will disappear the more you progress through the podcast, but it's not our favorite UI. End of Google Play Music? As much as we love Google Play Music, the truth is that Google doesn't seem happy with it. In 2018, the company revealed a new music streaming service, YouTube Music, which not only offers full albums and individual songs for streaming but also many remixes, live performances and music videos. YouTube Premium, the paid version of YouTube Music, costs the same as Google Play Music for \$9.99 a month. Google has announced YouTube Music will eventually replace Google Play Music as the company's only music streaming service. However, it is unclear when exactly that will happen. Google Play Music may be turned off sometime in 2019, but we don't know exactly when. Google has indicated that when the shutdown occurs, Google Play Music users will have all their preferences, songs and playlists transferred to YouTube Music. Google Play Music's ability to upload and store up to 50,000 songs in the cloud for free will reportedly be supported for YouTube Music as well, at least eventually. We'll update this feature when Google announces when Google Play Music will be turned off, along with how the transition to YouTube Music will take place. If you want to switch to another streaming service when shutdown is announced, you can download songs or albums you've purchased on Google Play Music. Get ready — it's likely to take a long time. How to use Google Play Music - WrapGo that's how to use Google Play Music. Did we miss something? Do you have any other questions about this service? Unmut comments and we'll make sure to update this article periodically. Google Play Music Coverage Google Play Services is one of the most important parts of Android. It helps connect everything together and hold it all there. Many of your apps use Google Play Services every day. However, strong service is also quite illusive. Some people don't even know it's there. That means when it comes to updating, some people may not know what to do or why they are doing it. We can help fix all that. Here's everything you need to know about Google Play Services. What is Google PlayGoogle Play Services is a layer of software that apps, Google services, and Your Android together. It runs in the background of your Android device at all times and manages things like your push notifications, whenever the app wants your location, and and everyday things like that. Google implements this service as a kind of catch so that every app developer can use the same tools as all other developers. It is also part of Google Mobile Services, or GMS. It also hides sensitive information from apps and manages basically every other background task for battery efficiency. Basically, it only allows apps from the Google Play Store to connect to the Google API and helps do a lot of background things. This is important because you can't just have the Google Play Store on your Android device. You also need Google Play Services to manage them. It's a packed deal. Thus, it is very important to not only have it, but also stay up to date. How to update Google Play ServicesIn most cases, it should be updated itself in the background. This is an app on the Google Play Store and you can even view it by clicking here. This way, the play store will be updated every time the Play Store updates your other apps. QuicklyMan your phone, click this link to go to the Play Store. Tap the Update button on the Google Play Services page. This method may not work on every smartphone. Official wayGo to your phone's Settings menu and tap Apps & Settings Notification. On some devices, it may be just Apps. Scroll down and tap a Google Play service and tap App Details. You should be able to update the app from there by pressing the Update button. Please note, this does not work on all devices. If you don't see an update button, try the quick method above. There are some rare cases where the app needs an update but it does not appear in the Play Store for some reason. Google recommends that you do the following, and then try updating again. Clear cache and dataGo to your phone's Settings menu and tap Apps & Settings Notification. Again, this may be just apps on some devices. Scroll down, then tap a Google Play service. You'll see an option to clear the data and cache it there. Do. Repeat the process for the Google Play Store as well. Here's a bigger tutorial if you need help with clearing caches and data. After that, you'll see updates. If not, then give it a day or two if the update hasn't been released for you. Google often releases updates in launches so everyone doesn't get them at once. Download Google Play Services APKWe absolutely do not recommend installing Google Play Services in this way for various reasons. However, tech savvy who know what they are doing may want to do an update or installation manually and there is a way to do it. Download and install apk yourselfAgain, we highly recommend updating via Google Store and don't use this method unless you know exactly what you're doing. Downloading and installing the wrong APK can cause all sorts of problems and different devices can sometimes have different versions of Google Play Services. Please do some research before trying this or leave the application alone. How to disable the Play ServiceThis one is a bit complicated because the service cannot be disabled on every smartphone. Sometimes the choice is gray and you can't do it. Ironically, I can't disable the app on my Samsung Galaxy Note 10 Plus, but I can on pixel 3a I run an Android 11 developer preview. Anyway, this is how you do it. Turn off Google PlayNavigate Services to Settings, then to Apps & Settings Notification. Scroll down and click Google Play services. The Disable and Force Close options must be at the top. If the option isn't grayed out, just tap Disable and follow the prompts. Keep in mind this can damage most of the functionality of your device. If the options are grayed out, here's how you can at least restrict Google Play Services to help prevent battery draining. Restrict Google PlayGo Services to Settings, and open Apps & Settings Notification. Scroll down and click Google Play services. Tap the Permissions option. Select the permissions you don't want to have Play Services and select the Deny option. By removing permissions, you prevent Google Play Services from performing many tasks in the background. Fix common problems This application can cause a lot of problems, especially after a software update and when it needs to update itself. There are many potential problems, but fortunately only a few solutions are possible and they are all pretty easy to do. If Google Play Services are causing problems, here are the best and most effective troubleshooting methods. Steps to try your phone Reboot first. Sometimes Google Play Services are a bit of a hiccup after things like software updates and quick reboots start fresh systems. This can eliminate a lot of problems. Use the tutorial above to make sure it's up to date in the Google Play Store. Older versions of the app may not play well with something else on your phone. If the steps don't work: Go to Settings, then Apps, notifications, and scroll down to Google Play services. Navigate to the right place and clear the cache and data. Repeat this process for the Google Play Store as well. Reboot your phone. Double-check for Play Services updates. Third potential method to fix ProblemsGo to Settings, then Applications & Settings notifications, and scroll down to Google Play services. Check the version number you have. Use the tutorial above to download the same version of Google Play Services from third-party sources. Follow these instructions to install the APK. Sometimes this fixes poor application installations or poor updates. If all failsFactory resets your device. There is a kind of problem between the app, your phone's OS, and the Play Service. It's much easier, faster, and more efficient to reset the device and start fresh. Note the issue when you reinstall the app to make sure it doesn't happen or, if it happens, you at least know what caused it. Play Services issues are not as common as they used to be. However, in general, the cause is usually a problem between your phone's OS and the Play Play Service version have or an issue between the Play Services and the app you installed. Google Play services are one of the most important parts of the Google Android experience. It connects everything together and does not require OS updates to improve. However, powerful applications are often difficult to understand and can cause occasional problems. If there's anything else you'd like to know about Google Play Services, check with us in the comments and we'll do our best to add it to the article! Article!
